Title: Communicable Diseases - Bloodborne Pathogens

Related Policy and Procedures: Policy 2.1.10 Communicable Diseases and Occupational Exposure to Bloodborne Pathogens

Division of Responsibility: Human Resources

I. COMMUNICABLE DISEASE

Communicable diseases, those that have serious effects on human health, can pose a threat to the college community. The College will take all reasonable measures to ensure the safety of members of the college community during global and local infectious disease events. Communicable disease is defined as an illness due to a specific infectious agent or its toxic products that arises through transmission of that agent or its products from an infected person, animal, or reservoir to a susceptible host, either directly or indirectly through an intermediate plant or animal host, vector, or the inanimate environment. Examples of communicable disease include but are not limited to chicken pox, hepatitis, measles, tuberculosis, meningitis, mononucleosis, whooping cough, and other viral diseases that reach a pandemic level, and for purposes of this Policy only, those communicable diseases which constitute a disability pursuant to the Americans with Disabilities Act.

The College shall not exclude individuals with communicable diseases unless a determination is made that the individual presents a health risk to themselves or others. The College shall consider the educational or employment status of those with a communicable disease on an individual basis.

A. Procedure

1. All information and records that identify a person as having a communicable disease shall be strictly confidential.
2. Disclosure of medical information shall be made by the President or designee only to those on a need-to-know basis to protect the welfare of persons infected with a communicable disease or the welfare of other members of the College community.
3. Unauthorized disclosure of medical information by an employee of the College is prohibited. Violation of this prohibition may result in the suspension from, or termination of employment.
4. A person who knows or has a reasonable basis for believing that they are infected with a communicable disease is expected to seek expert advice about their health circumstances and is obligated ethically and legally to conduct themselves responsibly toward other members of the college community.
5. Faculty and staff of the College and employees of contractors, or contracted services, who are infected with a communicable disease are urged to notify the

College of The Albemarle Policy

Policy Number: 3.4.5

Pages: 2 of 4

appropriate dean/director so that the College can respond appropriately to their health needs. Students are urged to share information with the appropriate dean/director for the same reason.

6. A person infected with a communicable disease (including the AIDS virus whether active or undetectable viral load) will not be excluded from enrollment or employment or restricted in their access to the College's services or facilities unless, in individual cases, the college administration determines exclusion or other restrictions are necessary for the health and welfare of others at the College.
7. Included in making decisions in individual cases which restrict access to employment may be the college president, legal counsel for the College, the deans/directors, the individual's personal physician, the local health director (or designee), and if necessary, another physician with expertise in managing communicable disease cases.
8. The College shall provide information regarding communicable diseases.

B. Immunizations

Prior to admission or employment, the College may require students and employees to be immunized from certain communicable diseases, including but not limited to measles, mumps, rubella, tetanus, varicella, meningitis, diphtheria, and pertussis. Students and employees are excused from providing proof of one or more of the required vaccinations if the student or employee has one of the following:

- a lab blood test/titer documenting immunity; or
- a statement of contraindication to a vaccine (accompanied by a physician's statement);
- a statement of religious exemption.

Requests for religious or medical exemption from an immunization requirement are required to be submitted on the appropriate COA exemption request form for review by the College. Student requests are submitted to the coordinator of accessibility and student conduct. Employee requests are submitted to the Human Resources Department.

The immunizations listed here are not meant to supersede more restrictive requirements for employment or participation in a specific college program or class, such as childcare, classes that lead to a medical degree or certificate, or clinical programs.

C. Public Health Incidents

Should influenza, or any other communicable disease, reach a pandemic level, the president shall regularly monitor the situation by communicating with local and state health officials and by reviewing media sources. Should any communicable disease reach a pandemic level within or near the College's service area, the president, after consulting with local, state, or federal health officials, may take the

following actions if it is determined to be in the best interest of the college community to prevent the spread of the disease:

- a. Close the College or certain college buildings and/or programs temporarily;
- b. Limit or prohibit employee travel and/or student field trips;
- c. Prohibit those infected with a communicable disease from coming onto the college campus;
- d. To the extent allowed by law, requiring or encouraging employees and students to receive immunizations (not already required by the College) that prevent the spread of an infectious or communicable disease before coming back onto the College campus; and
- e. Other specific actions deemed necessary for the safety of the college community.

The president, or designee, shall not quarantine any student or employee while on campus unless the quarantine is ordered by local, state, or federal health officials. Persons who are infected with a communicable disease that has reached a pandemic level or know of someone in the college community who is, should contact college officials immediately. Students should contact the vice president of student success and enrollment management or designee and employees should contact the Human Resources Department for reporting under this policy.

Any actions undertaken pursuant to this policy will be in accordance with applicable federal and state laws, college policies, and in the best interest of all parties.

II. OCCUPATIONAL EXPOSURE TO BLOODBORNE PATHOGENS

The College shall comply with federal regulations and state statutes regarding bloodborne pathogens as set forth in the Federal Register, 29 CFR §1910.1030, and the North Carolina Administrative Code, 10A NCAC 41A, by attempting to limit/prevent occupational exposure of employees to blood or other potentially infectious bodily fluids and materials that may transmit bloodborne pathogens and lead to disease or death.

A. Reasonably Anticipated Occupational Exposure

An employee who could "reasonably anticipate", as a result of performing required job duties, bodily fluids, or other potentially infectious materials is covered by the OSHA Bloodborne Pathogens Standard, the North Carolina Administrative Code, and this Policy. "Occupational Exposure" includes any reasonably anticipated skin, eye, mucous membrane, or parenteral (brought into the body through some way other than the digestive tract) contact with blood or other potentially infectious materials that may result from the performance of an employee's duties. "Good Samaritan" acts, such as assisting a co-worker or student with a nosebleed would not be considered "reasonably anticipated occupational exposure."

B. Universal Precautions

Universal precautions will be in force at all times. All blood, body fluid, and other potentially infectious material will be handled as if infected. The program standards for the control of potential exposure to HIV and HBV as outlined in the OSHA Rule "Occupational Exposure to Bloodborne Pathogens" Standard 1910.1030, the NC Administrative Codes, or the most current standards available will be followed.

C. Testing

An employee who suspects that s/he has had exposure to blood or body fluid may request to be tested, at the College's expense, provided that the suspected exposure poses a significant risk of transmission, as defined in the rules of the Commission for Health Services. The HIV and HBV testing of a person who is the source of an exposure that poses a significant risk of transmission will be conducted in accordance with 10A NC Administrative Code 41A .0202 (4) (HIV) and 41A .0203(b)(3) (HBV). The College will strictly adhere to existing confidentiality rules and laws regarding employees with communicable diseases, including HIV or HIV-associated conditions.

D. Exposure Control Compliance

The College shall comply with OSHA Regulation 29 CFR 1910.1030 and promote a healthy and safe environment for both employees and students. The College proposes to do this through minimizing the risk of transmission of infectious diseases that are blood or body fluid borne. To achieve compliance with OSHA Regulation 29 CFR 1910.1030, the College will maintain an Exposure Control Plan covering the following areas:

1. Procedures,
2. Protective equipment,
3. Hepatitis vaccinations,
4. Post-exposure and follow-up care, and
5. Training.

A copy of the Exposure Control Plan is available in the office of the chief operations officer.
